

# Handbook of Public Communication of Science and Technology

Massimiano Bucchi, University of  
Trento, Italy and Brian Trench, Dublin  
City University, Ireland

Comprehensive yet accessible, this key *Handbook* provides an up-to-date overview of the fast growing and increasingly important area of 'public communication of science and technology', from both research and practical perspectives. As well as introducing the main issues, arenas and professional perspectives involved, it presents the findings of earlier research and the conclusions previously drawn. Unlike most existing books on this topic, this unique volume couples an overview of the practical problems faced by practitioners with a thorough review of relevant literature and research. The practical handbook format ensures it is a student-friendly resource, but its breadth of scope and impressive contributors means that it is also ideal for practitioners and professionals working in the field. Combining the contributions of different disciplines (media and journalism studies, sociology and history of science), the perspectives of different geographical and cultural contexts, and by selecting key contributions from appropriate and well-respected authors, this original text provides an interdisciplinary as well as a global approach to public communication of science and technology.

## Contents

Introduction 1. Popular Science Books 2. Science Journalism 3. Science Museums and Science Centers 4. Cinematic Science 5.
